

## **December 2011**

TERANOV and KIDOVA have signed an exclusive partnership agreement to work together in the development of geothermal energy by providing a complete set of expert services.

TERANOV is a French new venture engineering and services company for new and renewable energies, dedicated towards high and medium enthalpy geothermal energy in Latin America and the Caribbean. Offices are located in Guadeloupe (Caribbean) and in Colombia (Latin America). TERANOV's activities encompass pre-feasibility studies, reservoir assessment, geological, geochemical and geophysical operations, data analysis, reservoir and drilling engineering, drilling supervision and well services at both exploration and production stage for conventional geothermal resources.

KIDOVA is a French consulting and research and development company located close to Paris. Since 1993, KIDOVA has developed extensive expertise in different fields in the oil & gas, environment, and geological disposal sectors. This expertise includes geostatistics for natural resources evaluation and risk analysis, reservoir engineering, hydrogeology and geological modeling. KIDOVA is also expert in the characterization and modeling of naturally fractured reservoirs and in the simulation of single and multiphase flows in porous and fractured media.
