

December 2013

TERANOV and KIDOVA joined to create KITERGEO (KIDOVA - TERANOV GEOSCIENCES), a company that will provide study and engineering services in the high and medium temperature geothermal field. The first project of KITERGEO will be to carry out a magnetotelluric (MT) survey in Bolivia and to conduct the data processing and interpretation. It should be followed by a study of the geothermal resource, within the frame of a collaboration between France and Bolivia.
